

ACM Survey on PhD Production in India for Computer Science and Information Technology 2012 – 2013

Pankaj Jalote
Director and Professor, IIT Delhi

The purpose of this study is to collect reasonably reliable data on PhD production in CS in India, and then use it to identify useful trends. This exercise was motivated by the Taulbee report in the US, and Prof. Pankaj Jalote of IIT-Delhi has been leading it. The first report was done for the year 2011- 2012 (available at <http://iiitd.ac.in/news/acm-phd-study/2012>). Based on the inputs and experience from the same, the survey and report for academic year 2012-13 has incorporated a few changes.

Institutes Included

Last year, the study included approximately 40 PhD granting Institutes, which were identified by a committee and a criterion. This year, the study has attempted to include all institutions which have a PhD program in CS/IT.

A list of 2507 institutes from all over India was obtained from AIEEE. According to the data available on the websites, of these institutes, 73 institutes stated that they have a PhD in CS or IT. We added to these, other institutions (IITs, NITs, etc.) which are known to be granting PhDs in computer science – inputs for this was taken from various researchers and faculty and from the previous study. This gave a total of 132 institutes which have a PhD program and which could be included in this study. This list of institutions is given in Appendix H.

Data Collection

An online form was created, and sent to the Head of Department (CSE/IT) and the Director of the institutes. The form asked for information on: the number of PhD faculty, number of non-PhD faculty, total number of PhD students enrolled and the total number of PhDs graduated last year who got their degree. The form also asked for the stipend that was paid to the PhD students and the major problems that the institutes face with regard to the PhD programme.

Reminders were sent, and the institutions were informed that if they failed to respond, the data from their websites would be used. To those institutes which provided the data for the last report, but did not do so for this report, it was mentioned that data from last year's report would be used.

We got responses from 29 institutes from the form and 5 on email. From those which did not respond, we used data from website or last year's report – through this another 14 institutes were included. Thus, a total of 48 institutes are finally included in this study. We assume that the other institutions (i.e. which did not respond and for which we could not find relevant data) don't have an active PhD program, or if they do, it is too small to be of any significant impact.

For this year's report, we have grouped the institutions as follows:

- Group 1: Institutions which provided the data about number of faculty, PhDs enrolled, and PhDs awarded. (34)
- Group 2: Institutes which provided data last time but did not do so for this year's report. (4)
- Group 3: Institutions which did not submit the filled form, but the number of faculty, and the total number of PhDs enrolled was available on their website. (3)
- Group 4: Institutions which did not submit the form and we could not find information about the PhD students enrolled on their websites, but obtained information about the number of faculty. (7)

We estimated PhDs produced for Group 3 and 4 in the manner similar to last year, based on the number of PhD students enrolled, or based on the number of PhD faculty (in some cases, like the new IITs, as they have not been around for long, if they did not provide the data, the number of PhDs produced last year was taken as 0).

For group 2, we took the data from last year's study – assuming that it would not have changed significantly this year.

Analysis

PhD Production

The number of students who completed their PhD between June 2012 to August 2013:

Group 1 institutes: 167

Group 2 institutes (estimated): 3

Group 3 institutes (estimated): 12

Group 4 institutes (estimated): 12

To better understand where these PhDs are being produced, we divide the institutions in two categories: those that have 80% or more faculty with PhDs, and others. Presumably the first category represents the more research-focused institutions, while the second category is likely to be the more teaching-focused institutions. There are 29 institutions in the first category (List of these institutions and their data ids given in Appendix E), and 19 institutions in the second category (Appendix F). With this classification, we have the following for PhD production:

- ***Research-focused institutes produced a total of 148 PhDs and other institutions produced 46. The total number of PhDs produced last year from all institutions is 194.***

Last year, this number was 137, but we had included mostly the research-focused institutions. The change is largely due to the inclusion of other institutions in the study. From the Institutions that were included in the previous study, the number of PhDs produced has increased by about 10 this year. Based on the detailed data provided by Group 1 institutions, we can say:

- ***Of the total PhDs produced, 59% were male and 41% were females.***

Looking at the statistics for the number of students who are enrolled:

Group 1: 1359

Group 2: 31

Group 3: 99

Group 4 (Estimated): 108

For all the institutes, the total adds up to 1597 and for Group 1, 2 and 3 the total number of

PhD students enrolled are 1489. Additionally, the total number of part time students doing PhDs in institutes belonging to Group 1 is 239.

To estimate the number of students who would be completing their PhD in another 5 years, we use the same method we used for last year's report. With this we can say:

The estimated number of PhDs graduating will gradually increase in 5 years to about 260 from research-focused institutes, and a total of about 350 per year from all institutions. If we also include the part time PhD students, then the estimated number of PhD in the next 5 years is appx 420.

Areas of Research

In this section we analyse the areas of research chosen by the students who completed their thesis between 2012 – 2013.

As can be seen from fig 1, the most popular area of research is Networks. Theory and Algorithms and Database/Information Retrieval are fields which are also popular as a research interest among PhD students. (This data is only from institutes in group 1 who filled the online form.)

Fig 1: Area of research chosen by students who completed their PhD in 2012 - 2013

Comparing this with last year's response, we observe an increase in interest for networks and Database/Information Retrieval.

Employment Statistics

Based on the data provided by institutes of group 1, the most popular choice of employment after completing PhD is teaching or joining a research job in India.

Fig 2: The employment options chosen by students who completed their PhD in 2012-2013.

Stipend/Compensation given to PhD students

Based on the data provided by 27 institutes about the stipend paid to a PhD student, we can say:

The highest salary given: Rs 29,000

The lowest salary given: Rs 8,000

Average salary a student can expect is: Rs. 18,237

Issues/Challenges faced by the PhD program

The online form had an open question for institutes to list down the issues they face with the PhD program. The response that we got can be broadly categorized into the following (in order of importance):

- Shortage of Faculty
- Attracting good students to pursue PhD
- Financial Support
- Lack of tie ups in the industry and other institutions
- Employment opportunities after successful completion
- Choice of Problem area for PhD

Faculty

For the 48 institutes covered in the study, the total number of faculty with PhD is 818 and the average faculty with PhD in the CSE/IT department of an institute is 17.

Visvesvaraya National Institute of Technology Nagpur

Notes:

- IIIT, IIT Kanpur, IIT Mandi provided their data on email and were subsequently moved to Group 1.
- IIT Kharagpur corrected the number of their non-PhD faculty after the initial draft of the report was sent.
- IIT Gandhinagar was moved to Research Oriented Institutes after a correction was made in the number of their non-PhD faculty data.
- IIT Delhi provided their PhD data in two categories - IIT Delhi CSE and School of IT after the initial draft of the report was ready.

- The data of IIT Delhi and IIT Kharagpur which was given in two categories – School of IT and CSE, was combined after suggestions were given for the initial draft of the report.
- IIT Madras also gave their PhD data after initial draft of the report. Their faculty data was taken from the website and they were moved to Group 1 from Group 2.
- IIT Patna corrected their PhD data after the initial draft of the report was sent.
- Data for both CSA and SERC was combined and given by IISc on email when asked for validation.
- ISI Kolkata has many different departments/centres which has CS faculty. Faculty from ACMU, MIU, CVPR, ECSU, ASU, BIRU, CoEC was taken in account in last year's report and has been used this time also.
- For DTU, the data for the IT and the CSE department was obtained from their website and then combined.
- The faculty data for the rest of the institutes in group 3 and 4 was obtained from their respective websites.
